Our Experience

Over the past **thirty five years**, more than hundred small and large organizations in the private and public sector have been provided software packages, implementation & data processing services and project consultancy by Systems Dynamics.

We Customize

We are confident that SDBS will conform to more than 85% of your requirements. We realize that every company is different and hence we customize our software to incorporate the unique requirements of our customers, in a quick, reliable and economical manner, hence satisfying 100% needs.

We have helped numerous companies increase the efficiency of their operations and communication, making a positive impact on their profits and competitiveness. Our motto is to make a full functionality enterprise business software system available to SMEs within their budgets. SDBS is cost effective and carries a quick ROI for users.

Quick ROI

Cost effective software solution for all your operational needs to improve profitability

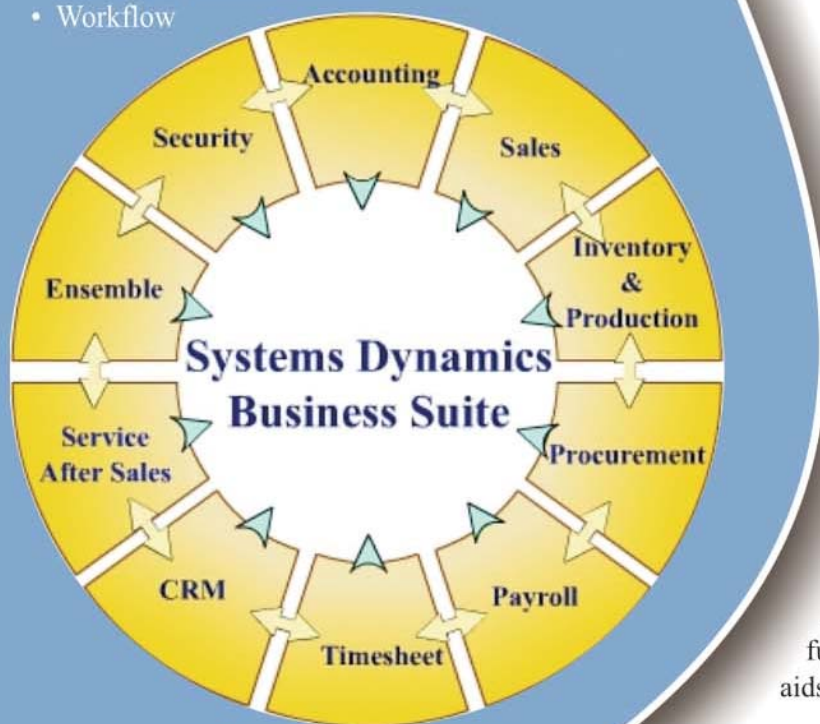

Deployment Options

SDBS is offered with two deployment options depending on budgets and IT commitments:

- **Server/On-site License** – Those desirous of using own IT infrastructure and staff can opt for this.
- **Software as a Service (SaaS)** – Those wanting to focus on their core competence and not invest in servers, license softwares and IT staff to managing data backup, configuration management and systems upgrades should opt for this.

Business Intelligence

SDBS has dashboards, which are a single location for all the information pertaining to a customer, vendor or job function. Financial ratios tell you where the business function performance is within the allowed range. SDBS aids in making good business decisions.

SDBS has comprehensive features and reporting system to enable the managers to keep controls and monitor the operations of the organization.
